

Microsoft has defined a pan-European character set known as WGL (Windows Glyph List). This contains approximately 652 characters that are required for Western, Central and Eastern European languages. Many of Microsoft's core fonts for Windows and the web support WGL, and they have become popular with multi-national companies as well as software and hardware developers who do business in the European Community. WGL fonts make it easier to create and share multilingual documents.

Ascender is noted for our expertise to create fonts with extended language support, and to enhance an existing font to support the WGL character set. For more information on our custom font capabilities, please contact us.
